

## AI-Generated Image & Analysis

 **Task:** Use AI image generation tools (DALL·E, Deep Dream, RunwayML, etc.) to create an AI-generated image based on a prompt.

**PROMPT: A playful dog in park**

### OPENART.AI

### DEEPDREAM

### CHATGPT

## **REPORT:**

By observing all the three of the image the basic of idea of the park that the AI suggested was with lots of trees and lamppost along the walking path.

For the playful dog it took the dog running towards us as a default by any AI and also their mouth open.

Openart.ai made a very realistic image compared to others. The deepdream AI used contrasting colour making it look like a painting.

Both openart.ai and deepdream used autumn season for the playful nature but chatgpt used spring as its playful season.

Overall openart.ai had the most realistic image among them and all ai did good with the prompt.
